

Tree Cover Status & Change

FOR NELSON COUNTY, VA

81.2%

Total Percent of County with Tree Cover

\$56.1 Million

Annual Benefits provided by Tree Cover (in reduced air pollution, stormwater, & carbon dioxide)

-572 Acres

Net Loss of Tree Cover on Developed Lands, 2014 to 2018

What is the land use/land cover breakdown in your county?

301,446 ACRES OF LAND AREA
IN NELSON COUNTY

81.2% **Tree Cover**¹
244,675 acres

10.9% **Agriculture**
32,773 acres

1.4% **Turf Grass (Lawns)**
4,097 acres

1.3% **Impervious (Buildings/Pavement)**
3,925 acres

5.3% **Other**²
15,846 acres

0% **Non-Forested Wetlands**
129 acres

1. Tree cover includes all trees occurring on all land uses, such as individual trees found over turf, impervious, agricultural, wetlands, or other lands. It also includes areas of "forest," defined in this dataset as patches of tree cover 1 acre or greater, with a minimum patch width of 240 feet.
2. Other includes a mixture of non-treed land uses not captured in the main pie chart categories. See the [Data Guide](#) for detailed definitions of "other" and all the land use categories.

Land use/land cover statistics were generated based on 2018 imagery using the 2022 edition of the [Chesapeake Bay Land Use and Land Cover Database](#).

Where does tree cover occur in your county?

96.8%
is in forest
(236,873 acres)

0.6%
is over impervious
(1,429 acres)

1.5%
is over turf grass
(3,733 acres)

1.1%
is other tree cover
(2,639 acres)

What are some benefits of tree cover in your county?

Total Air Pollution Removal Value
15.5 Million lbs removed annually
\$718,000 saved annually
Total air pollution removal includes CO, NO₂, O₃, SO₂, and Particulate Matter (PM2.5, PM10).

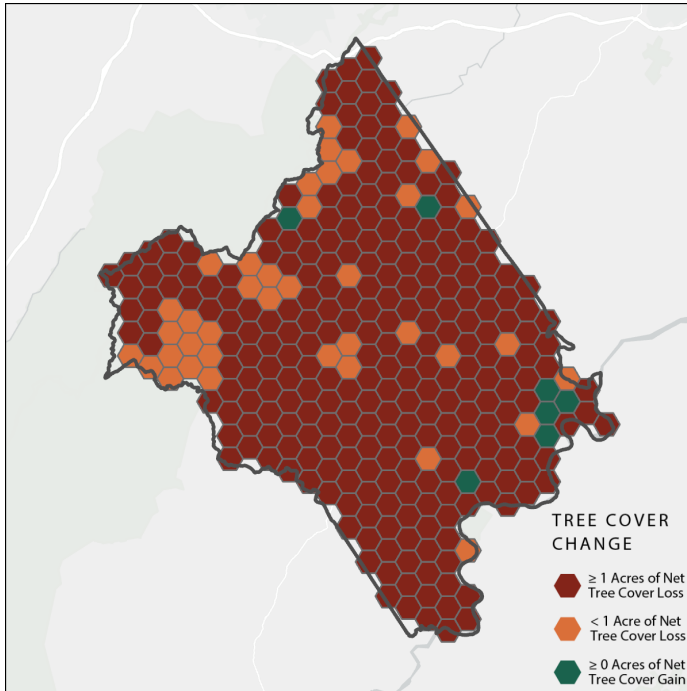

Gallons of Reduced Stormwater Runoff Value
97.9 million gallons reduced annually
\$874,700 saved annually

Carbon Sequestered Value
291,000 tons removed annually
\$54.5 million saved annually

Calculated based on 2018 tree cover data using: landscape.itreetools.org

How is tree cover changing on developed and developing lands?

Understanding how your tree cover changes over time can inform the sustainable management of forests and community trees. The map to the left shows where your county has lost and gained tree cover from 2014 to 2018, focusing on land that is already or newly developed.

Tree cover can be lost quickly due to human activities (e.g., construction) or natural events (e.g., severe weather).

Tree cover can be gradually increased through tree planting and natural regrowth, but these gains may take 10-15 years to be detected in high resolution imagery.

Since mature, healthy trees provide significantly greater community benefits than newly planted trees, it is important to both preserve existing tree cover and seek opportunities to grow new trees and forests. Local land use planning, ordinances, and tree programs play a critical role!
